

CORVUS Corner Converter

The CORVUS Corner Converter from ErgoVerse converts a right angled or tightly curved desk corner into a fully usable and accessible workspace. It slides over the existing work surface (up to 1.375" thick), bridging the corner and creates a comfortable diagonal corner that improves user comfort and improves the overall function of the workspace.

The CORVUS Corner Converters can be deployed to any L-shaped desk up to 1.37" in thickness. The Small and Medium sizes offer a 17" bridge, sufficient for many applications. The Small, with an upper surface width of just 17", is designed to be used with a compact keyboard. The Medium also offers a 17" front bridge but the upper surface is 35" wide, more than enough to accommodate any keyboard (even split adjustable models) and mousing device with room to spare. The Large model offers a generous 21" diagonal bridge and an even larger 39" wide upper surface able to accommodate a keyboard, mousing devices (right and/or left), a notepad, or whatever is desired. The simple rectangular shape of the CORVUS means that devices or workspace accessories are evenly supported, with no limitations as to where they can be placed. The 13" depth of all models ensures sufficient depth for deploying a central or inline pointing device with any suitable keyboard.

All CORVUS Corner Converters are constructed of heavy gauge steel and are equipped with pads to protect the desk surface. They also have an adhesive strip to ensure that the converter does not shift position, although in most cases the weight of the converter alone will keep it secured in place. The front lip is pre-drilled to accommodate the mounting of most common adjustable keyboard track/tray systems and has additional holes in the two corners where screws can be used to achieve a more secure mounting if required.

Part #	Dimensions	Bridging Distance
CCC-S	17" W x 13" D x 1.375" H	17"
CCC-M	35" W x 13" D x 1.375" H	17"
CCC-L	39" W x 13" D x 1.375" H	21"
